THE
VEIN CENTER
at

 King's Daughters
Medical Center

The Vein Center at KDMC

is Southwest Mississippi's most comprehensive vein center offering patients purpose-driven, personalized evaluation and treatment utilizing sound medical techniques and technology.

For the treatment of medical conditions associated with varicose veins, we offer the most progressive and minimally invasive treatments performed by surgeon, Dr. Michael Stewart.

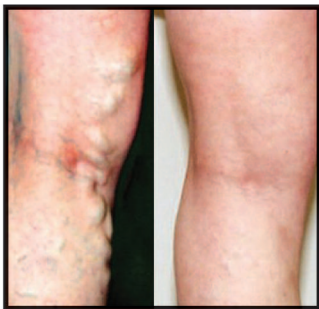

Do you suffer from any of the following?

- Leg Pain and Swelling
- Leg Heaviness
- Restless Legs
- Leg Cramps
- Blood Clots
- Varicose Veins
- Leg Discoloration
- Leg Ulcers
- Spider Veins

If so, you may be **one of the 45 million** Americans who suffer from venous disease.

About Varicose Veins:

Varicose veins are enlarged veins that are swollen and raised above the surface of the skin which occur due to a weakening in the

vein walls and valves. They can look dark purple or blue and have a lumpy, bulging and/or twisted, ropelike appearance. Those who suffer from varicose veins are likely to complain of their legs feeling heavy, swollen, tired, restless and achy.

Varicose veins are usually caused by insufficiency of the superficial venous system. They develop when valves in the veins (that facilitate blood flow back to the heart) stop functioning properly. As a result blood pools in the veins and causes them to get larger. These bulging veins cause symptoms resulting in pain, edema, skin discoloration and even ulceration—a condition known as chronic venous insufficiency or venous reflux disease. Contributing factors include age, gender, heredity, obesity, pregnancy and standing occupations.

About Spider Veins:

Tiny red or blue bursts on your legs are spider veins.

They are the result of dilated venous capillaries that fill with blood and become visible. They

are frequently seen on the thighs, around the knees, on the calves and at the ankles.

Specialized Services Offered by The Vein Center at KDMC

VenaCure® EVLT laser ablation procedures for the treatment of great and small saphenous vein reflux disease and incompetent perforator veins and removal of symptomatic varicose veins.

For the treatment of spider veins, each patient receives an individualized treatment regimen tailored to his/her needs using **sclerotherapy and other treatments.**

All procedures are performed on an outpatient basis in The Vein Center at KDMC under local anesthesia. There is virtually no down time and recovery is typically rapid. Most patients return to normal activity immediately.
